

HEART CHEAT SHEET – Measurements are rounded off

Holds 1500 Mls or
50.72 oz Close enough to 50oz

Depth
51mm = 5cm
Or 2 inches

Measurement per 1cm depth = 1500 mls divided by 5 = **300mls** per cm

Using Resin Casting Powder or other similar products to calculate how much product per cm you will need.

300 x **1.8** = 540 grams (note some of the powder vary slightly so you may require **1.9** or **2**). Start with the 1.8, you can always mix a little more. Better than wasting product.

4 Powder: **1** Water = **5** Parts

540 grams divided by 5 = 108 grams water (1 part). You can always add a bit more water if want to add embellishments just to give yourself more time.

108grms x 4 = 432 grams Powder (4 parts).

Stir all together making sure you don't have any lumps.

OUNCES & INCHES. To make it easy I will work in ½ inch measurements

50oz divided by 4 = 12.5oz per 1/2"

12.5 x 1.8 = 22.5oz

4 Powder: **1** Water = **5** Parts

22.5 oz Divided by 5 = 4.5 oz Water (1 Part). You can always add a bit more water if want to add embellishments just to give yourself more time.

4.5 oz x 4 = 18 oz (4 parts)

Stir all together making sure you don't have any lumps.
